Metro Ticket Generating System in ServiceNow

Date	Team ID	Project Name	Maximum Marks
04 September 2026	_____	Metro Ticket Generating System in ServiceNow	4 Marks

Purpose

Understand the needs, behaviours, frustrations and expectations of people involved in metro ticket booking so the ServiceNow solution addresses the real user journey.

SAYS	THINKS
• “I want to book my metro ticket quickly.” • “I need the fare to be clear before I submit.” • “I want my ticket to be easy to verify at the station.” • “I do not want to enter the same information repeatedly.”	• The booking process should be simple and accessible. • Fare calculation should be accurate for the selected route and journey type. • A digital QR ticket should provide convenient proof of booking. • My information should be protected from unauthorized database access.
DOES	FEELS
• Selects starting and destination stations. • Chooses single/return journey and number of passengers. • Selects a payment mode and, when needed, enters payment details. • Submits the catalog request and uses the generated QR code.	• Frustrated by slow or manual ticketing. • Concerned when fare information is unclear. • More confident when required fields and form behaviour are clear. • Reassured when the ticket has a scannable QR code and access is controlled.

Users / Stakeholders

- Passengers / customers – primary users who submit metro ticket requests.
- Station managers / metro operations team – operational stakeholders concerned with valid ticket use and station-side verification.
- IT administrators – configure tables, catalog items, automation, portal components and access controls.

Key User Need

A simple digital booking experience that captures the required travel details, calculates the applicable fare, generates a QR-based ticket and protects backend data through role-based access.
