

Brainstorm & Idea Generation

Metro Ticket Generating System in ServiceNow

Date	Team ID	Project Name	Maximum Marks
04 September 2026	_____	Metro Ticket Generating System in ServiceNow	4 Marks

Step 1 – Team Gathering, Collaboration and Select the Problem Statement

Selected problem statement: PS-1 – making metro ticket booking simpler by guiding the passenger through route selection, journey type, passenger count, fare calculation and submission.

Step 2 – Brainstorm, Idea Listing and Grouping

Booking Experience

- Service Catalog item for Book a Metro Ticket
- Reference fields for Starting From and Going To stations
- Journey-type choice: Single Journey / Return Journey
- Passenger-count selection with required-field validation

Fare & Automation

- Automatically calculate fare from source, destination, journey type and passenger count
- Auto-populate fare fields instead of asking the passenger to calculate manually
- Use Catalog Client Script and UI Policy logic to control form behaviour
- Use Flow Designer / automation to process submitted requests

Digital Ticket

- Generate a QR code after submission
- Display the QR code through a Service Portal widget
- Provide a clear digital confirmation that can be shown at the station

Security & Quality

- Use role-based ACLs to prevent normal users from directly accessing backend tables
- Validate mandatory and non-empty fields
- Test route/fare matching, visibility and QR-generation behaviour

Step 3 – Idea Grouping Outcome

The ideas naturally grouped into four solution areas: Booking Experience, Fare & Automation, Digital Ticket, and Security & Quality. The implemented project combines these areas into one ServiceNow-based metro ticket workflow.
